INDEX

acyclic digraph, 335, 340, 343
adjacency matrix, 25, 48–52, 53, 179, 317
  formal, 317–23, 324
  regular, 157, 160
  isomorphic, 157
  tree, 343
adjugate, 301
admittance matrix(*see also* Laplacian matrix), 30
affine plane, 278–80
  order of, 280
Amitsur–Levitzki theorem, 331–4
arc, 53
  back arc, 98
  capacity of, 164
  cross arc, 98
  dominant, 89–90
  forest arc, 98
  forward arc, 98
  weight of, 291–2

bipartite graph, 44, 107–44, 178, 317
  adjacency matrix of, 44
  bipartition of, 44, 107
  complete, 108, 135, 147, 148, 162: line graph of, 153
  elementary, 124
Birkhoff's theorem, 9
blocks, 278
branch, 62, 63

Cayley–Hamilton theorem, 327–9, 333
Cayley table, 250–1, 254–5, 258, 262, 268, 271
chain, 25, 210
  directed, 54
  length of, 210
  weight of, 211, 212
characteristic polynomial, 26, 28, 36, 76–7, 88, 328–9
chromatic index, 51
circuit, 54
circulant matrix, 158–62, 233
circulation, 168–9
cocktail party graph, 36–7
column-linear set, 139
complete digraph, 291
complete graph, 23, 26, 39, 318
  line graph of, 152
  spectrum of, 28
completely reducible matrix, 76
complete mapping, 251
complexity(of a graph), 38–40, 324
composition, 191, 196
conference graph, 151, 155
conference matrix, 154
configuration, 3, 20, 293, 306, 307–8
  complementary, 305
  dual, 4, 12
  isomorphic, 4
conjugate partition, 193, 340
connectivity
  algebraic, 40–3
  edge, 41
  vertex, 41
contraction, 62, 242
convex closure, 193–5
convex sequence, 192, 340
cospectral graphs, 26–7, 155
co-term rank, 125–6, 134
cover(of digraph), 134
covering sequence, 190–6
cut, 166
  capacity of, 166
cycle, 25
  directed, 54
cycle graph, 28

Downloaded from https://www.cambridge.org/core. Davidson College Library, on 28 Mar 2019 at 16:08:39, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/CBO9781107325708

cycle hypergraph, 144
cyclic components, 71
  computation of, 103–5
cyclic matrix, 77

decision problem, 245–8
  polynomial reducible, 246
  size of, 245
decomposition, 251
decomposition theorems, 108, 125–36, 184–8
degree of vertex, 24
demand, 169
depth-first number, 97
depth-first search, 97
derangement number D_k, 17, 222–3, 233
derangements, 201–2, 285
determinant, 8, 15, 16, 17, 21–2, 76, 89, 90, 92, 93, 94, 95, 134, 209–14, 235–48, 291–3, 294, 295, 296–7, 298–9, 301, 309–10, 311, 313–14, 314–16, 319, 323, 325–6
determinantal divisor, 337
diagonal, 112
diagonal structure (hypergraph), 136–44
  isomorphism of, 136–7: permutation, 140; partial transposition, 142–3; transposition, 140
difference sequence, 191, 195–6, 338, 339–40
digraph (directed graph), 53, 243
  adjacency matrix of, 53
  capacity function, 164
  condensation, 56
  characteristic polynomial, 88
  cyclically r-partite, 70
  general, 53
  girth of, 93
  imprimitive, 68–9
  indegree sequence, 173, 176
  minimally strong, 61–8
  outdegree sequence, 173, 176
  primitive, 68
  regular, 53
  spanning subdigraph, 97
  spectrum, 88
  splitting of, 244
  strongly connected, 54, 55–61
  vertex-weighted, 89–90
directed cycle
  dominant, 90
  weight of, 243
directed forest, 96–9
  spanning, 97
divisor sequence, 337–8, 339–40
doubly stochastic matrix, 9, 11, 117

edge, 23
  endpoints, 23
edge coloring, 50
eigenvalues, 16, 26, 27, 76–7, 88–96, 130–2, 145, 146
eigenvalue inclusion regions, 89–95
elementary divisors, 337
elementary similarity, 341
e_n, 145
essential column, 110
essential line, 110
essential row, 110
Euler conjecture, 275, 282–3
Eulerian matrix, 31
Eulerian trail, 332
Euler ϕ-function, 21–2
Evans conjecture, 263–7
even digraph, 243–4
exponent, 78–87, 83–5, 117
  gaps, 84

factor, 48
Ferrers matrix, 206–7, 208, 217
flow (network), 164–71
  supply–demand, 169–71
  value of, 165
forest, 178
friendship theorem, 151
Frobenius normal form, 58, 96–102
  computation of, 96–106
fundamental trace identity, 327, 329–31
fully indecomposable matrix, 110–18, 119, 124, 228–33, 296–7, 299, 303
  inductive structure, 116
fully indecomposable components, 115, 140–1, 297
Frobenius–Schur index, 72, 81

Gale–Ryser theorem, 176
Galois affine plane, 279, 280
general digraph, 53
generalized matrix function, 295
generic matrix, 294–7
generic nilpotent matrix, 335–43
generic skew-symmetric matric, 317
Gersgorin's theorem, 88
graph (general), 23, 24
  complement, 23
  complete, 23, 26
  complete multipartite, 147, 155
  connected 27
  connected components, 27
  cospectral, 26–7, 155
  cubic, 24, 37

Downloaded from https://www.cambridge.org/core. Davidson College Library, on 28 Mar 2019 at 16:08:39, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/CBO9781107325708

decomposition of, 108, 109
degree sequence, 179, 183
diameter, 27
disconnected, 27
distance, 27
edge, 23: multiplicity of, 24
isomorphic, 23, 25, 26
order, 23
regular, 24, 37, 43
spectrum of, 28
simple, 23
subgraph, 23
induced, 23: spanning, 23, 30
vertices, 23: adjacent, 23; isolated, 23

Hadamard's determinant inequality, 214
Hadamard product, 294, 317
Hall's theorem, 299–301
Hamilton cycle problem, 245–6, 247
Helly type theorem, 19–20
Hoffman polynomial, 147, 157, 162
Hoffman–Singleton graph, 154
horizontal line, 277

imprimitive matrix, 70
incidence matrix, 3, 29, 35, 230, 304, 306
formal 293–303
oriented, 29, 38
weighted, 210–14
Index, 103–5
index of imprimitivity, 68–78
computation of, 103–5
integer sequences, 191–5
intersection matrix, 11–12
formal, 304–10: symmetric, 305, 306, 309
invariant factors, 337
irreducible matrix, 55–61, 113, 145, 297–300
inductive structure, 67–8
irreducible components, 58
computation of, 96–106

Jacobi's identity, 321–2, 301
join, 192
Jordan block, 336, 340–3
Jordan canonical form, 335–7, 340–3
Jordan partition, 336, 338, 339–40, 343
length of, 336

K-decomposition, 187
König's theorem, 6, 9, 44, 47, 125, 128, 196, 300, 301–3

k-path, 336–7, 338
k-path number, 336–7
k-subset, 203

Laplacian matrix, 30, 38, 41, 325
formal, 324–7
latin rectangle, 250–3
completion of, 260–2, 68
latin square, 250–90
completion of, 259–62
embedding of, 262–3
enlargement of, 265–7
equivalent, 253
horizontal line of, 270
idempotent, 281–3, 283–4
latin line of, 270, 277
mutually orthogonal, 272–5, 286–7
normalized, 250
number of, 284–5
partial, 259–69
partitioning of, 262–3
self-orthogonal, 287–8, 289
symmetric, 251, 268, 269, 283
vertical line of, 270
lattice graph, 153
line, 1, 252, 277, 278
linearizable set, 143, 144
linear set, 139
line cover, 6, 110–12
line graph, 35–7
spectrum of, 35
l_2-norm, 213–14
Lowlink, 100–1

MacMahon's master theorem, 310–16
MacNeish's conjecture, 275, 282–3
majorization, 175
matching, 44–52, 112, 189
in digraph, 134
perfect, 48
matching sequence, 189–96
matrix, 1
back diagonal of, 263
column sum vector, 172
complement of, 3, 12
cover of, 6
cyclic, 70
cyclic components, 71
diagonally dominant, 89
elementwise product, 236
existence theorems for, 172–84
line of, 1
number of 1's, 123
permutation, 1
proper cover of, 6
row sum vector, 172

Downloaded from https://www.cambridge.org/core. Davidson College Library, on 28 Mar 2019 at 16:08:39, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/CBO9781107325708

matrix (*cont.*)
submatrix of, 17: principal, 17
sum of elements of, 185
triangle of, 18
upper triangular, 338–9
matrix-tree theorem, 325–6
matroid
regular, 31–4
unimodular, 31–4
max flow–mincut theorem, 166–8
meet, 192
ménage numbers, 202–3, 204–5, 233, 234, 285
minimax theorem, 6
mixed matrix, 303
Moore graph, 153
generalized, 154
multicolored graph, 131–2
multiedge, 24
multigraph, 23

nearly decomposable matrix, 118–24, 228
inductive structure, 120–1
number of 1's of, 122
nearly reducible matrix, 61–8, 118, 124
inductive structure, 64
number of 1's of, 66
net, 277–80
network, 164
capacity-constrained, 164
supply–demand, 169
network matrix, 32, 33
Newton's formula, 334
nilpotent index, 335–7
nilpotent matrix, 335–43
nonzero diagonal, 112, 136
no-parallels postulate, 280
NP, 245–8
NP-complete problem, 246–7, 268
n-set, 3
nullity, 336, 338, 340

orthogonal latin squares (MOLS), 269–84
orthogonal mate, 271, 272

P, 245–8
pairwise balanced design, 278–83
Paley graph, 151
parallel class of lines, 277
parallel lines, 279
parallel postulate, 278
partial transposition, 142
partial transversal, 251–2, 254–8
partition, 192, 336
partition closure, 196
partly decomposable matrix, 112
path, 54
path-number sequence, 337, 338, 339–40
perfect matching, 247, 251, 258, 318–19, 321–2
random algorithm for, 322
permanent, 8, 15, 18, 68, 117, 136, 198–249, 292, 295, 313, 314–16
conversion of, 236–45
evaluation of, 199–200, 235–48
inequalities for, 214–34
permanental minor, 203–4
permutation
sign of, 291
simultaneous, 25
permutation digraph, 292
permutation matrix, 1
Frobenius normal form, 60
3-dimensional, 252–3
Petersen graph, 37, 148, 154
complexity of, 43
Petrie matrix, 19
pfaffian, 318–23
Playfair's axiom, 278
Poincaré's theorem, 31
points, 270, 278
polynomial algorithm, 245–8
polynomial digraph, 157–63
polynomial identity, 327–34
primitive matrix, 70, 73–4, 78–87, 117, 158
exponent of, 74, 78–87
problem of the 36 officers, 271–2
projective plane, 15–17, 20–1, 280–1, 282, 283
order of, 281

quasigroup, 251

reduced adjacency matrix, 107, 178
reducible matrix, 55
regular graph, 145–7, 155
rook numbers, 205–6
rook polynomial, 205–6
rook vector, 205–6, 206–8
row-linear set, 139
Ryser's permanent formula, 199–200

satisfiability problem (SAT), 246–7
Search, 97
SearchComp, 101
set differences, 307
set difference matrix
formal, 305, 309

Downloaded from https://www.cambridge.org/core. Davidson College Library, on 28 Mar 2019 at 16:08:39, subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms. https://doi.org/10.1017/CBO9781107325708

set intersections, 11
sets of imprimitivity, 70
sharp **P**-complete problem, 247
skew-symmetric matrix, 317, 319–20
sign of number, 238
sign-nonsingular matrix, 238–44, 248
  maximal, 248
sign pattern, 238
singularity, 321–2
sink, 164
Smith's matrix, 21–2
Smith's theorem, 21–2
source, 164
spanning arborescence, 324–7
  root of, 324
spanning directed tree, 324
spectrum, 26, 27
splitting of arc, 243–4
splitting of vertex, 243–4
standard polynomial, 317, 329, 331–4
star, 28
  algebraic connectivity, 43
  spectrum, 28
Stirling number, second kind, 208
strong components, 54
strongly connected digraph, 157
strongly regular graph, 148–55
  complement, 149
  eigenvalues, 150
strongly stable hypergraph, 137
strongly stable set, 137, 138–9, 143
subdivision, 643–4
subpermutation matrix, 49–51, 125, 128, 135, 184–8, 188–96, 267–8
supply, 169
symbolic direct product, 274
symmetric matrix, 129–30
  existence theorems for, 179–84
  exponent, 80, 85
  index of imprimitivity, 78
system of distinct represenatives (SDR), 7, 10, 201, 227, 247
  Hall's theorem, 7

term rank, 7, 10, 110, 111, 114, 189, 214, 294, 303, 338
total support matrix, 115, 116, 232
totally unimodular matrix, 31–4
Touchard's formula, 205
tournament matrix, 54, 55, 109
  Frobenius normal form of, 60
trail, 25
  directed, 54
transversal, 227, 251–2, 253, 258, 268, 281
  common, 227
  weak, 255–6
tree, 32, 37, 38, 39, 230, 343
  adjacency matrix of, 184
  algebraic connectivity, 43
  directed, 65–6, 96–9: spanning, 97
  incidence matrix of, 37
  oriented, 32
  spanning, 38
triangular graph, 152
tridiagonal matrix, 393
trivial trace identities, 329
Tutte's theorem, 45–8, 320–2

valency, 24
Valiant's hypothesis, 247–8
vector, 11
  column sum vector, 172
  conjugate, 175: diagonally restricted, 177–8
  majorized by, 11, 175
  monotone, 172
  row sum vector, 172
vertical line, 277
Vizing's theorem, 49–51, 125

walk, 25, 26
  closed, 25
  directed, 54
  endpoints, 25
  open, 25
wedge product, 322–3
weighted digraph, 243, 291–2
  weight of arc, 325, 335
  weight of directed cycle, 291–2
  weight of digraph, 325
width, 337, 338
